ACKNOWLEDGMENTS

Alhamdulillahirobbil'alamin. All praise and gratitude the researcher always pray to the presences of Allah SWT because of His mercy, grace, and countless blessings so that the researcher can finish this thesis.

May peace and blessings be continually bestowed upon the noble Prophet Muhammad SAW, whose teachings and exemplary life elevated humankind from a state of moral and spiritual decline to a position of dignity, wisdom, and honor as the most esteemed creation in the universe. His guidance has played a fundamental role in shaping human civilization and continues to inspire people across generations toward righteousness and enlightenment.

The researcher is fully aware that this thesis could not be completed without the profuse assistance from various parties who always support, guide, and provide advice to the researcher in completing this thesis. Either directly or indirectly morally or materially. Therefore, the researcher would like to thank profusely, especially to:

1. Both beloved parents of the researcher, Ahmad Bajo and Faridah who love and support the researcher in this research.
2. Prof. Dr. H. Lukman S. Thahir, M.Ag., as the Rector of Datokarama State Islamic University Palu, along with the elements of the leadership who have encouraged and provided policies to the researcher in various aspects.
3. Prof. Dr. Saepudin Mashuri, S.Ag., M.Pd.I., as the Dean of the Faculty of Tarbiyah and Teacher Training, who has directed the researcher in the lecture process.
4. Ruslin, S.Pd., M.Pd., M.Sc., Ph.D., as the head of the Study Program of English Tadris at UIN Datokarama Palu, who has provided input for further thesis improvement.

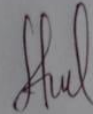

5. Hijrah Syam, S.Pd., M.Pd., as secretary of the English language education program, who has provided invaluable support and knowledge while the researcher was studying at UIN Datokarama Palu.
6. Dr. Hj. Adawiyah Pettalongi, M.Pd., as an academic advisor who always helps, supports, motivates, and directs the researcher in every problem while studying at UIN Datokarama Palu.
7. Fitriningsih, S.S., S.Pd., M.Hum., as the first supervisor lecturer who helped and guided the researcher in correcting the deficiencies that exist in the researcher's thesis so that this thesis can be completed.
8. Fatima, M.Pd., as the second supervisor lecturer who helped and guided the researcher in correcting the deficiencies that exist in the researcher's thesis so that this thesis can be completed.
9. Dr. Hj Nur Asmawati, S.Ag., M.Hum., as the first supervisor lecturer who has guided, helped, and advised in this research so that this thesis can be completed.
10. Rabaniyah Istiqamah, S.Pd., M.Pd., as the second supervisor lecturer who has guided, helped, and advised in this research so that this thesis can be completed.
11. To all lecturers and staff of the English study program at the State Islamic University (UIN) Datokarama Palu who have provided a lot of knowledge, experience, motivation and support to the researcher while studying at UIN Datokarama Palu.
12. Dra. Hj. Saihun Aldjufrie, M.Pd.I., as the principal of MTs AIKhairaat pusat palu who has given permission to researcher so that researcher can research at the school.

13. Zaitun Pangeran S.Pd., as a seventh grade English teacher who has guided and provided full support to the researcher.
14. Researcher's dearest students of class VII C and VII D who has helped and cooperated in this research.
15. Researcher's beloved grandmother, Umi Salamah, who raised Researcher and gave Researcher love, thank you for all the kindness you have shown to Researcher.
16. Researcher's beloved uncle and aunty, Farinah S.Pd and Mansyur S.Ag, M.Ag,. who always gave support and finance the researcher's tuition so that the researcher can continue education.
17. Researcher's beloved brother and sisters, Abdul Syukur, Nurul khotima, Khusnul Khatima, Rizka Amaliah and Fitri Nur Laili who always support researcher.
18. Researcher's closest friends and online friends, Nur Azizah, S.Pd., Siti Nur Fathonah, S.Pd., Rezkiatni, Sagita Mutiara Putri, Hazna Athifah and Desi Raudatul Jannah who has been willing to hear researcher complaints during the thesis process, accompany, provide support and encouragement.
19. All the researcher classmate at TBI 3 who has helped and accompanied since the beginning.
20. Last but not least, to all the parties that the researcher cannot mention one by one whose name has helped, supported, and encouraged the researcher in completing this thesis.

With this, the researcher is very grateful for all the kindness that has been given to the researcher. I hope all the good deeds that they give get a proper reward from Allah SWT. Aamiin

**Title : Improving Students Writing Skill By Using Mind Mapping
Technique at Seventh Grade of MTs AIKhairaat Pusat Palu**

This research was conducted to address the difficulties faced by students in writing, primarily caused by their limited vocabulary and grammar mastery, as well as a lack of interest and practice and students have difficulty in describing or writing down their ideas in text especially in English. To overcome these challenges, the researcher implemented the mind mapping technique to examine its effectiveness in improving students' writing skills.

This research employed a quantitative method using a quasi-experimental design, involving two groups: an experimental group and a control group, each consisting of seventh-grade students from MTs AIKhairaat Pusat Palu. A total of 64 students were selected through purposive sampling. The data were collected using pre-tests and post-tests. The findings of this research answered the research question by showing that the mind mapping technique can significantly improve students' writing skills. This was evidenced by the comparison between the pre-test and post-test scores of the experimental group, which showed a substantial increase after the treatment.

The results showed a significant improvement in the writing skills of the experimental group. The average pre-test score was 61.57, while the post-test score increased to 83.17. This indicates that the use of mind mapping was effective in enhancing students' writing skills. The statistical analysis supported the hypothesis, with the t-test value (2.449) exceeding the t-table value (1.999) at the 0.05 significance level.

The implication of this research is that English teachers, particularly at the junior high school level, should consider integrating mind mapping as a teaching technique in writing instruction. This technique helps students to brainstorm ideas, structure their thoughts, and organize them coherently before writing. By visually mapping out their ideas, students become more confident in expressing themselves through written text. Furthermore, the use of mind mapping can increase student engagement, especially for those who previously struggled with writing due to lack of vocabulary or grammatical difficulties.

In conclusion, the mind mapping technique proved to be an effective to technique improve writing skills among seventh-grade students.

CHAPTER I

INTRODUCTION

A. *Background of the Research*

Many kinds of writing are applied as a subject matter at schools in Indonesia. Writing needs some elements to complete the information, like vocabulary and grammar. The teaching and learning process in junior high school can be successful if it is supported by the students' motivation. They should be interested in English lesson as it is one of the primary subjects which is taught in this grade of school until collage. Their motivation in writing also should be increased to practice them telling ideas through the words, in English language. On the other hand, writing is a way to tell ideas and opinion of someone who wants to explain others about some things.

Some techniques are applied to improve the students' writing skill, such as mind mapping technique. Mind mapping technique helps students in calling their ideas before they start writing in paragraph form. Using mind mapping technique, students are expected can improve their ability in writing skill, primarily writing descriptive text. It seems like what Hedge said in her book entitled "Writing", she stated that using mind-map before writing can make us have ideas like we make a construction in building.¹

In addition, writing is a tool for communicating to other people which has purpose to present information whether it is useful or not for the reader. In this

¹ Tricia Hedge, Writing, (Oxford: Oxford University Press, 1988), p. 30.

case, writing is useful to help students tell their ideas through the words. Besides they tell the ideas, they also must have three significances in their school.²

Firstly, teacher teaches grammatical structures, idioms, and vocabulary that are been learning by the students who unconsciously remember them when they write. Secondly, students can explore their ideas when they write and can be a good explorer of the words finding. Lastly, the students are interested in learning something new, new language, to be written on their writing.

English is useful to help teachers in Indonesia who want to increase their knowledge of educative information from international sources. It can be techniques of teaching, strategies of learning process. In some schools, teachers should have suitable method and technique in teaching foreign language based on the needs of the subject matter in the school. Moreover, approaches in teaching foreign language need to be applied so that teacher knows what the students' need.

Based on preliminary observation, the teacher said that students in MTs AlKhairaat Pusat Palu still have problems in their writing. It is because of their English vocabulary and grammar mastery are still poor, students are less practice, students have difuculty in describing or writing down their ideas in text especially in English, and they do not interest in learning English subject because students very afraid if they writing word or sentences still have mistaken.

² Ann Raimes, *Techniques in Teaching Writing*, (Oxford: Oxford University Press, 1983), p. 3

Based on the explanation above, the researcher conducted a research entitled “Improving students writing skill by using mind mapping technique at seventh grade of MTs AlKhairaat Pusat Palu”.

B. Problem of the Research

Based on the background above the problem of the research formulated as follows: can mind mapping technique improve students writing skill at seventh grade of MTs AlKhairaat Pusat Palu?

C. Research Objectives

This research aimed to find out whether the use of mind mapping technique can improve students’ writing skill at seventh grade of MTs AlKhairaat Pusat Palu or not.

D. Research Significance

The significance of this research can be useful for:

1. For the Teachers
 - a. Knowing suitable methods and techniques in teaching English
 - b. Knowing the way of improving students’ ability in English writing skills
2. For the Students
 - a. Knowing the characteristics of writing skill
 - b. Understanding the generic structures, language features, and tenses.

E. Outline of the Research

At this point, the writer explains about outline of the research. This research consists of three chapters as follows:

1. Chapter I Introduction

This chapter presents the background of the research, the research problem, objectives, significance of the research, and the systematic outline of the thesis. It explains the rationale behind choosing the topic and the relevance of mind mapping in improving writing skills.

2. Chapter II Literature Review

This chapter discusses relevant theories and previous studies related to writing skills and the mind mapping technique. It includes a theoretical review, a conceptual framework, and the formulation of research hypotheses based on reviewed literature.

3. Chapter III Research Method

This chapter consists of approach and design of the research, population and sample of the research, variable of the research, operational of the research, instrument of the research, technique of the research, technique of data collection and technique of data analysis.

4. Chapter IV Findings and Discussion

This chapter presents the results of the research, including statistical analysis of the pre-test and post-test data. It also discusses the effectiveness of the mind mapping technique in improving students' writing skills based on the findings.

5. Chapter V Conclusion and Suggestion

This final chapter concludes the research by summarizing the key findings and drawing conclusions based on the analysis. It also provides

suggestions for teachers, students, and future researchers regarding the use of mind mapping in teaching writing.

CHAPTER II

LITERATURE REVIEW

A. *Previous Research*

There are a few studies which discuss about mind mapping.

Table 2.1 Previous Research

No	Name and Title	Result of the Research	The Difference	The Similarities
1	Alma Januar Putra, entitled: Improving Students' Ability in Learning Simple Future Tense Through Mind Map (An Action Research at the Eleventh Grade of Office Administration Class of Purnama Mandiri Vocational High School, Pondok labu, Jakarta) ³	The results show that there were 90.26% of students who passed the minimal mastery level criterion (KKM) of learning achievement. The high percentages of the result convinced that mind mapping could help students to improve their	The researcher used CAR (Classroom Action Research) as method in her research, and the researcher was found that mind map can improve his students' ability in learning simple future tense. In this research the researcher used quantitative method and	The similarity in this study with previous research is that it implementing of the mind mapping technique in learning especially in writing skill.

B. Theoretical Review

1. Definition of Language

Language is a tool of communication has an important role to reveal an intention to someone else. People will be able to express their through and feeling by using language. Language, communication and life cannot be separated.

Language can be applied in many aspects, such as education, society, politics, economics and culture.⁶

Language a system of conventional spoken manual (signed) or written symbols by means of which human beings, as members of a social group and participants in its culture, express themselves.

2. *Language Skill*

In Indonesia, English is a foreign language. Learning a foreign language is an integrated process that the learner should study the four basic skills in English namely:

a. Listening

Listening is one of the forms of communication that people do daily. Research had showed that adults spend 45% - 55% of their daily life communication by listening which is more than any other form of communication such as speaking.⁷

b. Speaking

Speaking is identified to be difficult to learn, where speaking is very important in human life. By speaking, people can communication with other someone usually face some trouble in social interaction like he or she cannot understand what others say but he or she not able to communication it.

⁶ Nursyamsi, 2006): 1

⁷ Owen Hargie, *Skilled Interpersonal Interaction, Theory, and Practice* (London: Routledge, 2011): 177.

c. Reading

Reading is an active process that depends on both an author's ability to convey meaning using words and your ability to create meaning from them.⁸ Reading is a way of sharing another person's insight, joys, sorrow, or creative endeavors.

d. Writing

Writing is the hardest skill. Writing is related with making text activities, such as: generating and arranging ideas, and developing ideas in sentence, such as: create the ideas organize the ideas drafting, revising. After that, to produce a good writing query standards, it must fulfill all of the components standards, those are: grammar, paragraph, content, the writing process, purposes and mechanics.⁹

3. *Language Components*

a. Vocabulary

Vocabulary was basic to learn English. It is reason why vocabulary is very important to teach for students. Vocabulary is component could be tool increase all the skills of English. Without vocabulary students could not improve their ability to communicative with foreign people, read English literature, erote English literature.

b. Pronunciation

Pronunciation is the language feature the most readily identifies speakers as non-native. Since it can identify us an non-native, we do not need to pronounce

⁸ Anter Nancy, *Critical Reading for College and Beyond*, (New York: Mc Graw Hill): 5

⁹ Allce Oshlma and Ann Hogue, *Introduction to Academic Writing* (USA: Person Education Inc, 2012): 15.

like the way native speaker do. However, we need to be minimally intelligible while speaking.

c. Grammar

Grammar is a branch of linguistic that deal with the form and structure of words. Grammar is one of the oldest fields of study, as well as one of the most durable. Even Plato can be labeled an early grammarian, because he was responsible for dividing the sentence into subject and verb.¹⁰

4. *Definition of Mind Mapping*

Mind mapping is actually about using our mind to think about what the importance information should be in the writing is. Mind mapping is a technique used in starting the writing. It can be said as a planning of writing. Besides her, Tony Buzan, a famous British psychologist, developed mind mapping as a learning technique.¹¹ This technique was introduced as a note taking technique. For all his attempts in developing mind mapping, Buzan has given a very useful technique to be learnt and used by students in a learning process.

Eppler defines a mind mapping is a multicolored and image-centered, radial diagram that represents semantic or other connections between portions of learned material hierarchically.¹² Mind mapping has been used for individual note taking during the class by the students. Several studies have already highlighted the beneficial use of mind mapping for the purpose of note taking.

¹⁰ Laurie E, Rozakis, *The Complete Idiot's Guide to Grammar and Style, Second Edition*.

¹¹ Wen-Cheng Wang, Chung-Chieh Lee, and Ying-Chien Chu, "A Brief Review on Developing Creative Thinking in Young Children by Mind Mapping," *International Business Research* Vol. 3, No. 3 (July 2010), p.234

¹² Martin J. Eppler, "A Comparison Between Concept Maps, Mind Maps, Conceptual Diagrams, and Visual Metaphors as Complementary Tools for Knowledge Construction and Sharing," *Information Visualization* (2006), p. 203

According to Buzan, mind mapping has a natural organizational structure that radiates from the center and use lines, symbols, key words, color and images according to simple, brain-friendly concepts.¹³ A mind mapping converts a long list of monotonous information into a colorful, memorable and highly organized diagram that works in line with your brain's natural way of doing things. It can be used to generate ideas, take notes, develop concepts and ideas, and improve memory.

In conclusion, mind map is a graphic way of showing main idea from the center radiates out the related ideas use lines, symbols, key words, color and images. It is helpful for visual learners as they are illustrative tools that assist with managing thought, directing learning, and making connections. Although it was popularized as a note taking technique, mind mapping technique is also very useful in writing. Mind map helps a writer to develop his or her ideas. Some research shows that mind mapping helps students develop many skills such as dynamic thinking, critical thinking, recall and more coherent writing.

5. *The Function of Mind Mapping*

The function of mind mapping technique is explained by Hedge that "This technique can be used to explore almost any topic."¹⁴ The function of mind mapping is also admitted as a draft of writing before it is revised and edited and become the final project. Besides that, it is useful to throw away any unimportant information. Mind mapping is also used to call some ideas that come to our mind

¹³ Tony Buzan, *Buku Pintar Mind Map*, (Jakarta: Gramedia Pustaka Utama, 2005), p.

¹⁴ Riswanto and Pebri Prandika Putra, "The Use of Mind Mapping Strategy in the Teaching of Writing at SMAN 3Bengkulu, Indonesia" *International Journal of Humanities and Social Science*, Vol. 2 No. 21 (November: 2012), p.62

but it is difficult to be explained through the sentence directly. The function of mind mapping is not only for the existence of writing itself, but also for the specific purpose. For instance, we want to write some ideas about the things or topics, to make it simple, we can use this technique to look important vocabularies that is going to be written in our writing about general things or topics. It is expected can help us to write sufficiently based on the importance of writing itself.

Buzan stated that we can use mind mapping for planning, communicating, being more creative, saving time, problem solving, remembering, faster learning and so on. Mind mapping can be used by anyone who wants to remember things easily and in a more organized way and also by anyone who wants to simplify a difficult concept. Note-taking can be turned to a more enjoyable activity by using the mind mapping.¹⁵

Mind mapping is a powerful tool for assisting any form of writing. In some studies, there was found that most participants of the research attributed their improvement in writing to the use of mind mapping. The written works produced by using mind mapping have more relevant details and better organized and connected. Mind mapping also raised the performance of students all level of ability as they became more efficient in generating and organizing ideas for writing. There is also a positive attitude toward using mind mapping as pre writing activity.¹⁶

¹⁵ Tony Buzan, *Buku Pintar Mind Map*, (Jakarta: Gramedia Pustaka Utama, 2005), p.6

¹⁶ www.ThinkBuzan.com/Mind Mapping: Scientific Research and Studies

A Mind mapping can help you think with greater clarity to explore relationships between ideas and elements of an argument and to generate solutions to problems. It puts a new perspective on things by allowing you to see all the relevant issues and analyze choices in light of the big picture.

6. Steps in Using Mind Mapping

In applying mind mapping technique the researcher used the theory by Walker, his stated someone can just write idea in the center circle with subordinating ideas are written on the lines that extend from the circle. The steps are presented in the following explanations:

a. Start with a central concept

The concepts must be firm so it is broad enough to be explored with the mind maps and also it has to be narrow enough not to cause the writer ends up with multiple mind maps.

b. Write down the different ideas related to the concept

Write down the words that come mind as they related to the central concept and underline the words.

c. Use image and symbols in place words

use images and symbols instead of words whenever possible. Very basic stick figure or simple symbols can be used.

d. Use shapes to group sets words or images

Use shapes to show a relationship between words or imaged. For example, if the researchers are exploring a specific are of the central

topics, they can put all those words and images in squares. The main goal is to give the mind map an interesting look

- e. Incorporate colors to show relationships

The colors should be used in addition to shapes, symbols and creativity is needed in using colors.

There are five simple steps to make a mind map. Students need to decide the main concept first then associate it with the ideas following the concept.

7. Definition of Writing Skill

The definition of writing is often similar to speaking. It is because both skills are as productive skill. However, writing is the activity that is continued to the next activities after the writing itself or it can be said that writing is an ongoing process.¹⁷ In writing, we have to decide about what the topic which we are going to write is. Because of the writing is the process in continuity so when we write, we have to think about the draft, revise, and rewrite and draft, revise, and rewrite again until it is clear.

On the other hand, like what Meyers said in his book entitled *Gateways to Academic Writing*, "Writing is not easy. It takes study and practice to develop this skill. It is important to note that writing is a process, not a product".¹⁸ Writing is a way that the writer uses to talk to the others through the paper. Differ to speaking,

¹⁷ Alice Oshima and Ann Hogue, *Introduction to Academic Writing, Second Edition*, (New York: Longman, 1997), p. 2

¹⁸ Alan Meyers, *Gateways to Academic Writing*, (New York: Pearson Education, 2005), p. 2

in the process of doing it, the writer and the reader cannot meet like what the speakers and listeners do. They only can inter-act each other by the time that the writer finishes the writing.

Writing is not only through the words but also media. The primary message can be produced by picture, graphics, and even sound.¹⁹ We often do this way based on our needs. To whom we want our writing be read become the important thing we decide. The successful of our writing can be decided by the readers.

From all those statements, the definitions of writing can be concluded as a process with a must in having final product named writing itself. All steps of the process of writing actually should support the ideas, can be implied or stated, and follow the rules of writing clearly. Then, having enough ability in changing the ideas into written form is needed by the writers so that their readers can easily understand the message of what the writing is about. Effectively, different receiver of writing produces different understanding about information that is written. Finally, the suitable methods and techniques used in writing can make readers enjoy to the writing with additional information for specific reason, such as media, graphics, and pictures because they can be understood easily.

8. *The Process of Writing*

There are six areas of the writing process, even though writers do different things when they write, most successful writers turn their attention to these areas:

¹⁹ Andrea A. Lunsford, *The Saint Martin's Handbook*, (Boston: R.R. Donnelley & Sons Company, 2010), p. 23.

a. Generating ideas, establishing purpose, and identifying audience is the actions that firstly have to do before starting to write. Ideas is needed to build the writing then. Purpose should be decided to make writing be clear to what purpose is written. Then, identifying audience should also be paid attention to which the writing will be read. All of these three first actions are important before starting writing well.

b. Ordering ideas We may have many ideas we want to share, but we also have to remember that the ideas will affect our quality of writing itself. Therefore, ordering ideas is needed to make sense our writing whether it is nice or not.

c. Writing the first draft, if we compare writing to building construction that should have some planning, writing also has planning and it is called as draft. Writing the first draft is definitely important because it can throw away non-useful sentence of writing.

d. Revising (improving content, organization, and the expression of ideas), it is very suitable way to develop our writing into large topic, but not out of the topic. In revising, we also have to pay attention to the existence of our writing and what our writing contains of. It can be said that better revising, our writing will be better too.

e. Correcting errors (correcting errors in grammar, spelling, capitalization, and punctuation), we need to correct any grammar, spelling, capitalization, and punctuation that becomes our writing not well. Parts of speech

and grammar, indeed, gives more effects of audience's mind when they read our writing. Fortunately, we have this area to make our writing better.

f. Proofreading (making corrections in the final copy), is done by us as a writer so that the idea included does not make changes and the purpose of writing is still achieved to the reader.²⁰

9. *The Purposes of Writing*

The writer's reason for writing usually called as purpose, which can be stated or implied. There are two kinds of purpose:

a. The General Purpose consists of four purposes; to inform, to persuade, to express, and to entertain.²¹ In writing to inform, we usually use these purposes when we write information to inform others based on the specific reasons. Then, in writing to persuade usually used when the writer wants to persuade the readers to do the things that should be done. In writing to express, it is about the writing which consists of some expressions should be drawn in the text so that the readers can get information about what to be expressed. The last, in writing to entertain, surely, we find it in narrative text such as novel which its content consists of the stories entertaining the readers.

b. The specific purpose may be implied or stated. The implied specific purpose used in the literature and the stated specific purpose used in the expository writing for being easily in understanding the texts. It can be on the first sentence of a paragraph or on the last sentence of a paragraph. In other words,

²⁰ Barbara Fine Clouse, *The Student Writer*, Sixth Edition, (New York: Mc.Graw Hill, 2004), pp. 27—29

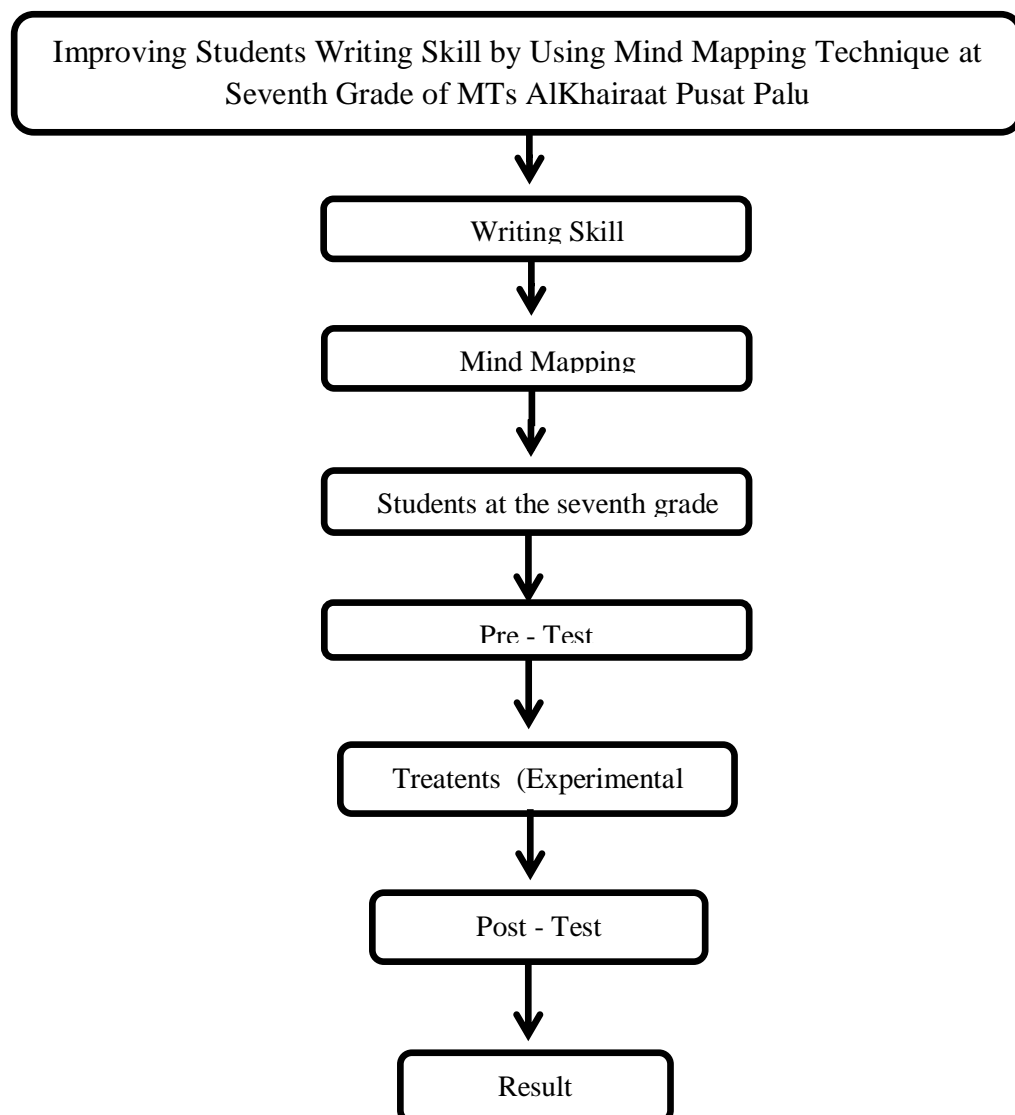

²¹ Betty Mattix Dietsch, *Reasoning and Writing Well*, Fourth Edition, (New York: Mc.Graw Hill, 2006), p. 7

Martha Heasley Cox, in her book entitled *Writing; Form, Process, and Purpose*, stated that there are four purposes of writing. They are: To Inform, to Amuse, to Satirize, and to Persuade.

C. Conceptual Framework

The conceptual framework underlying in this research is given in the following:

Table 2. 2 Conceptual Framework

D. Research Hypothesis

Ha : If the value of T-test higher than the value of T-table, the alternative hypothesis is accepted meaning can improve students' writing skill by using mind mapping technique.

Ho : If the value of T-test is lower than the value of T-table, the null hypothesis is accepted meaning cannot improve students' writing skill by using mind mapping technique.

CHAPTER III

RESEARCH METHODOLOGY

A. *Approach And And Design Of The Research*

The approach of this research was quantitative approach. The quantitative approach can be interpreted as a research approach based on philosophy of positivism, used to research in a particular population or sample, data collection using research instrument, quantitative data analysis/statistics with the aim of testing the established hypothesis. Quantitative approach imposed a lot of using numbers, ranging from data collection, interpretation of data and the appearance of the results²².

Furthermore, the design of this research was quasi experimental. Quasi experimental design is an experimental, the possible causes and effects between the treated group (experimental group) and not treated (control group).

The research design is presented in the following table:

Table 3. 1 Quasi Experimental²³

E	O₁	X	O₂
C	O₁		O₂

²²SuharsimiArikunto, *ProsedurPenelitianSuatuPendekatanPraktek* (Jakarta: Rineka Cipta, 2013), 130.

²³ Sugiyono, *Metode Penelitian Pendidikan: PendekatanKuantitaif, Kualitatif and R&D* (Bandung: Alfabeta, 2018), 76.

Where:

E = Experimental group

C = Control group

X = Treatment

O₁ = Pre –test

O₂ = Post –test

B. Population and Sample

1. Population

Population is the generalization region consisting of the subject or object that has certain qualities and characteristics set by the researcher to be studied and then withdrawn the conclusion²⁴. In this research the researcher used the seventh grade of MTs AlKhairaat Pusat Palu as the population in this research.

Table 3. 2 Population of the Research

No	Class	Number of Students
1	Class A	30
2	Class B	30
3	Class C	33
4	Class D	31
5	Class E	32
6	Class F	30
7	Class C	30
	Total Number of Students	216

2. Sample

According to Sugiyono, samples are part of the number and characteristics of the population. When large population and researchers are unlikely to learn all of the existing population, for example due to limitations of funds, energy and

²⁴Ibid., 117.

time, the researcher can use the samples taken from the population.²⁵ In this research, the researcher used purposive sampling, because not all samples have criteria that match the criteria studied, by setting considerations or criteria that must be met by the samples used in this research. This sample was taken from class VII C as the experimental class and class VII D as the control class.

C. Variable of the Research

Independent variable is variable that affect or are the cause of changes or the emergence of the dependent variable. Independent variable in this research is mind mapping technique. It is a method used by a teacher when teaching material. Dependent variable is a variable that is influenced or is the result, because of the independent variable. Dependent variable in this research is the students' writing skill.

D. Operational Definition

1. Improve

Improve is an innovative deep learning model designed to help students in develop their skills optimally is well increase student activity in learning. Improve is developed in Indonesia aims to make the learning process, efficient, effective and fun or society is often known as more active learning. Improve is learning with using an emphasis on the process of forming a concept and provide opportunities for students to play an active role in process.

²⁵Ibid., 75.

2. Mind Mapping

Mind map is a graphic way of showing main idea from the center radiates out the related ideas use lines, symbols, key words, color and images. It is helpful for visual learners as they are illustrative tools that assist with managing thought, directing learning, and making connections. Although it was popularized as a note taking technique, mind mapping technique is also very useful in writing. According to Buzan, mind mapping has a natural organizational structure that radiates from the center and use lines, symbols, key words, color and images according to simple, brain-friendly concepts.²⁶ A mind mapping converts a long list of monotonous information into a colorful, memorable and highly organized diagram that works in line with your brain's natural way of doing things. It can be used to generate ideas, take notes, develop concepts and ideas, and improve memory.

The function of mind mapping technique is also admitted as a draft of writing before it is revised and edited and become the final project. Mind mapping is not only for the existence of writing itself, but also for the specific purpose. For instance, we want to write some ideas about the things or topics, to make it simple, we can use this technique is going to be written in our writing about general things or topics.

3. Writing Skill

Writing is among the most important skills that foreign language students need to develop. It is the last stage in learning languages after listening,

²⁶ Tony Buzan, *Buku Pintar Mind Map*, (Jakarta: Gramedia Pustaka Utama, 2005), p.5

speaking. Writing skill differs from other skills like speaking and listening.²⁷ In other words the researcher can say that writing indicator whether students have gained all skills before or have not. Before the students have to write, they should be able to listen, to speak, and to read.

E. Instrument of the Research

The instrument of the research used in this research that served as data collectors was tests. A test can be defined as a tool or procedure used to find out or measure something in atmosphere, based on predetermined method and rules.²⁸ Test is a measuring tool for students. In this regard, the test has a function to measure the level of development or progress that has been achieved by students after they have taken the teaching-learning process within a certain period of time.

F. Technique of Data Collection

The method of collecting data is a technique or method that the writer can use to collect data, and the data-gathering instruments are selected and used by writer in the activities to collect data so that the activity is systematic and easier²⁹.

1. Pre Test

Pre-test can be interpreted as an activity to test the level of students' knowledge of the material to be delivered. Pre-test is given with the aim of knowing the initial ability of students regarding the material to be delivered. Thus the teacher as a facilitator can determine the model and method or delivering

²⁷ Henry Douglas Brown, *Teaching and Principles: An Interactive Approach to Language Pedagogy*, (San Francisco: Longman, 2001): 334.

²⁸ *Idem*, *Prosedur Penelitian Suatu Pendekatan Praktik* (Jakarta: PT Rineka Cipta, 2013), 67.

²⁹ Ridwan, *Statistika Untuk Lembaga dan Instansi Pemerintah/Swasta* (Bandung: Alfabeta, 2004), 137.

lessons that will be applied in learning. Pre-test is a test carried out with the aim of knowing the extent to which the material or subject matter to be taught has been mastered by students.³⁰

2. Treatment

After administering a pre-test to assess the students' writing abilities, the researcher then applied the treatment to the experimental class. Several steps of the treatment were as follows:

- a. The researcher gives some motivation and explain how important to learn English before starting the material.
- b. The researcher provided an explanation related to descriptive texts about a person and explained about mind mapping.
- c. The researcher asked the students to identify adjectives based on what the researcher drew on the board.
- d. The researcher provided worksheets for the students to complete in groups and present.
- e. The researcher and students summarized the lesson related to the descriptive text about the person.

3. Post Test

Post-test is a form of final evaluation of a lesson. The purpose of the post-test is to determine the success of the learning process and to measure the mastery of students' competence in the material taught by the teacher. Post-test is a test

³⁰ Anas Sudijono, *Pengantar Statistik Pendidikan* (Jakarta: Rajawali Pers, 1996), 69.

carried out to find out whether all the material that is classified as important can be mastered as well as possible by students.³¹

4. Scoring Rubric

Table 3. 3 Scoring Rubric of Writing Skill by Weigle³²

Component of Writing	Scores	Indicators
Content	4	Relevant to the topic and easy to understand
	3	Rather relevant to the topic and easy to understand
	2	Relevant to the topic but is not quite easy to understand
	1	Quite relevant to the topic but is not quite easy to understand
Organization	4	Most of the sentences are related to the main ide
	3	Some sentences are related to the main idea
	2	Few sentences related to the main idea
	1	The sentences are unrelated to each other
Vocabulary & Mechanic	4	A few errors in choice of words, spelling and punctuation
	3	Some errors in choice of words, spelling and punctuation
	2	Occasional errors in choice of words, spelling and punctuation

³¹Ibid., 70.

³² Sara Cushing Weigle, *Assesing Writing*, (Cambridge: Cambridge University, 2002) p.

	1	Frequent errors in choice of word, spelling and punctuation
Grammar	4	A few grammatical inaccuracies
	3	Some grammatical inaccuracies
	2	Numerous grammatical inaccuracies
	1	Frequent grammatical inaccuracies

In this research, the researcher was acted as instruments all at once data collectors. The procedure used in data collection :

1. The researcher determined the experimental group and control group by using mind mapping technique.
2. The researcher administered pre-test to experimental group and control group.
3. The researcher gave treatment to the experimental group for six meetings.
4. The researcher administered post-test to experimental group and control group.

G. Technique of Data Analysis

The following is the steps that the writer will conduct in analyzing data:

1. Determining the Standard Score

Standard score is raw score that has been converted into other forms based on their deviation from the mean value and are expressed in standard deviation units.

To find out the standard score, the research needs to know the mean and standard deviation of population because the formula for calculating the standard

scores is to subtract the observed value with the population mean and then divide by the standard the deviation.

The following is the formula for calculating the standard score is³³:

$$\text{Standard Score} = \frac{\text{Obtained Score}}{\text{Maximum Score}} \times 100$$

2. Determining Mean Score

Mean score is an average value obtained from the total number of scale values divided by the number of sample. The results is obtained from the sum of all existing values from each data, then divided by the number of existing data.

The following is the formula for calculating determining mean score:³⁴

$$M = \frac{\sum x N}{N}$$

Where :

M = The mean score

$\sum x$ = The sum of score

N = The number of students

3. Determining Mean Deviation

Mean deviation is a value used in determining the distribution of data in a sample and seeing how close the data is to the mean value. The mean deviation is

³³SuharsimiArikunto, *ProsedurPenelitian* (Jakarta: RinekaCipta, 2012), 278.

³⁴Ibid., 278.

the best measure of spread, because it describes the magnitude of the spread of each unit of observation.³⁵

The following is the formula for calculating determining standard deviation is:³⁶

- a. The formula will be used for experimental class :

$$Mx = \frac{\sum x}{N}$$

- b. The formula will be used for control class :

$$My = \frac{\sum y}{N}$$

Where:

Mx and My = The mean deviation

$\sum x$ and $\sum y$ = The sum of deviation

N = The number of students

4. Determining Square Deviation

Square deviation is a frequently used measure of the differences between values (sample or population value). Square deviation represents the square root of the predicted values and observed values or the quadratic mean of these differences. Square deviation is accuracy, to compare forecasting errors of different models for particular dataset and not between datasets, as it is scale-dependent.³⁷

³⁵Imam Gozali, *Aplikasi Analisis Multivariate Dengan Program IBM SPSS*, 23 (Semarang, 2016).

³⁶Arikunto, *Prosedur*, 279.

³⁷Koehler and Anne Burns Hyndman, Rob J, "Another Look at Measures of Forecast Accuracy," *International Journal of Forecasting* 22 (2006): 680.

The following is the formula for calculating determining square deviation is:³⁸

- a. The formula will be used for experimental class:

$$\Sigma x^2 = \Sigma x^2 - \frac{(\Sigma x)^2}{N}$$

- b. The formula will be used for control class:

$$\Sigma y^2 = \Sigma y^2 - \frac{(\Sigma y)^2}{N}$$

Where:

Σx^2 and Σy^2 = The square deviation

Σx^2 and Σy^2 = The sum of square deviation

Σx^2 and Σy^2 = The sum of deviation

N = The number of students

5. Finding Out T-test Value

T-test is one of the statistical tests used to test the truth or falsity of the hypothesis which states that between two mean samples taken at random from the same population, there is no significant difference.³⁹ So it can also be said that the definition of the T-test is an inferential statistical test method used to determine whether there is a significant difference between the mean of two data groups that may be related in certain features.

³⁸Arikunto, *Prosedur*, 279.

³⁹Anas Sudjiono, *Pengantar Statistik Pendidikan* (Jakarta: Rajawali Press, 2010).

The following is the formula for calculating finding out t-test value:⁴⁰

$$t = \frac{Mx - My}{\left(\frac{\Sigma x^2 + \Sigma y^2}{Nx + Ny - 2} \right) \left(\frac{1}{Nx} + \frac{1}{Ny} \right)}$$

Where:

t = The value of t-test

Mx = The mean deviation of experimental class

My = The mean deviation of control class

Σx^2 = The square deviation of experimental class

Σy^2 = The square deviation of control class

Nx = The number of students in experimental class

Ny = The number of students in control class

6. *Testing Hypothesis*

This technique aims to find out the value of t between the experimental class given the treatment and the control class that is not given treatment. The statistical tests used to test the alternative hypothesis truth or fallacy, which states that there is a significant difference between two samples randomly taken from the same population.

⁴⁰Arikunto, *Prosedur*.

CHAPTER IV

FINDINGS AND DISCUSSION

This chapter present and discusses the finding of the research. This research conducted to investigate the research problem.

A. Research Findings

This research was held at MTs Alkhairaat Palu. This research finding is answering the problem statement the formulated before. The researcher presents the answer to the problem statement contained in this chapter. The researcher gave the students tests which consisted of pre - test and post - test. The pre - test was given in the first meeting and the post - test was given in the last meeting.

1. Scoring classification Pre-test and Post-test in Experimental Class

In this research the experimental class is VII C which consisted of 33 students.

To calculate students' test the researcher used the following formula:

$$\text{Score} = \frac{X}{N} \times 100$$

Where:

X : Students writing score

N : Maximum score

Where:

C : Content

O : Organization

V and M : Vocabulary & Mechanic

G : Grammar

Based on the results of pre – test of the experimental class which is presented on the table 4.1, the researcher found the highest score was 81 only two students and the lowest score is 50. It showed the students' writing skills in the pre – test of the experimental class was low

Furthermore the researcher needs to know the mean scores of the pre – test in the experimental class by using following formula:

$$\begin{aligned} \Sigma \frac{\Sigma X_1}{N_1} \\ = \frac{2032,1}{33} \\ = 61,57 \end{aligned}$$

Where :

X_1 : Mean score of experimental class

ΣX_1 : Sum score of experimental class

n_1 : Number of students of experimental class

Based on calculating above the results indicate that the mean score of pre – test in experimental class was 61,57.

Where:

C : Content

O : Organization

V and M : Vocabulary & Mechanic

G : Grammar

Based on the results of post – test of the experimental class which is presented on the table 4.2, the researcher found the highest score was 100 and the lowest score is 75. It showed the students' writing skills in the post – test of the experimental class was good.

Furthermore the researcher needs to know the mean scores of the pre – test in the experimental class by using following formula:

$$\begin{aligned} & \Sigma \frac{\Sigma X_1}{N_1} \\ &= \frac{2744,7}{33} \\ &= 83,17 \end{aligned}$$

Where :

X_1 : Mean score of experimental class

ΣX_1 : Sum score of experimental class

n_1 : Number of students of experimental class

Based on calculation above the results indicate that the mean score of post – test in experimental class was 84,08. It showed that the mean score of post – test in experimental class had effectiveness progress from 61,57 (Pre – test) to 83,17 (Post – test).

The mean score of the experimental class had been found, then continued to calculate the standard deviation of pre – test and post – test for two classes which presented in the following:

Table 4. 3 Deviation and Square Deviation for Experimental Class

No	Name	Test Score		X	X2
		Pre – Test	Post - Test		
1	FH	62,5	87,5	25	625
2	GRJ	50	87,5	37,5	1.406
3	SPF	62,5	93,8	31,3	979
4	MAF	81,3	100	18,7	349
5	NNCB	68,8	93,8	25	625
6	K	50	87,5	37,5	1.406
7	HK	56,3	87,5	31,2	973
8	KA	68,7	93,8	25,1	630
9	LM	75	81,3	6,3	39,7
10	ZZL	62,5	81,3	18,8	353
11	ASA	68,8	93,8	25	625
12	AA	68,8	68,8	0	0
13	FRT	56,3	75	18,7	349
14	ZN	56,3	81,3	25	625
15	TANR	68,8	75	6,2	38,3
16	AA	68,8	81,3	12,5	156
17	MRR	68,8	93,8	25	625
18	ZA	68,8	93,8	25	625
19	NTN	81,3	87,5	6,2	38,3
20	ARI	62,5	75	12,5	156
21	TDA	68,8	75	6,2	38,3
22	SNP	50	87,5	37,5	1.406
23	NS	62,5	68,8	6,3	39,7
24	NS	37,5	75	37,5	1.406
25	JS	56,3	81,3	25	625
26	BP	62,5	81,3	18,8	353

27	ARI	68,8	93,8	25	625
28	AT	56,3	68,8	15,5	240
29	KNS	81,3	100	18,7	349
30	AIG	50	81,3	31,3	979
31	FA	50	75	25	625
32	PAS	43,5	68,8	25,3	640
33	NM	37,5	68,8	31,3	979
	Total	2032,1	2744,7	715,9	18.928

The number of deviation was 715,9 and the number of square deviation was 18,928. The mean score deviation of experimental class was calculated by the following formula:

$$\Sigma \frac{\Sigma X_1}{N_1}$$

$$= \frac{715,9}{33}$$

$$= 21,69$$

The mean deviation of experimental class was 21,69 it is on the basis of the mean score deviation. The sum square deviation of experimental class was calculated by the following formula:

$$SS_1 = \Sigma x_1^2 - \frac{(\Sigma x_1)^2}{n_1}$$

$$= 18.928 - \frac{(715,9)^2}{33}$$

$$= 18.928 - \frac{512.512}{33}$$

$$= 18.928 - 15.530$$

$$= 3.398$$

Where:

S_1 : Sum squares in experimental class

Σx^2_1 : Sum squared scores in experimental class

n^1 : Number of students in experimental class

Based on the calculation above the sum squared of deviation in experimental class was 3.398.

2. Scoring classification Pre-test and Post-test in Control Class

In this research the control class is VII D which consisted of 31 students.

To calculate students' test the researcher used the following formula:

$$\text{Score} = \frac{X}{N} \times 100$$

Where:

X : Students writing score

N : Maximum score

The results of pre – test and post – test for experimental are presented on the following table:

Table 4. 4 The Results of Pre – Test for Control Class

						270	1688,4

Where:

C : Content

O : Organization

V and M : Vocabulary & Mechanic

G : Grammar

Based on the results of pre – test of the control class which is presented on the table 4.4, the researcher found the highest score was 68 and the lowest score is 37. It showed the students' writing skills in the pre – test of the control class was low

Furthermore the researcher needs to know the mean scores of the pre – test in the control class by using following formula:

$$\begin{aligned} & \Sigma \frac{\Sigma X_1}{N_1} \\ &= \frac{1688,4}{31} \\ &= 54,46 \end{aligned}$$

Where :

X_1 : Mean score of control class

ΣX_1 : Sum score of control class

n_1 : Number of students of control class

Based on calculating above the results indicate that the mean score of pre – test in control class was 54,46.

V and M : Vocabulary & Mechanic

G : Grammar

Based on the results of post – test of the control class which is presented on the table 4.5, the researcher found the highest score was 100 and the lowest score is 50. It showed the students' writing skills in the post – test of the control class was good.

Furthermore the researcher needs to know the mean scores of the post – test in the control class by using following formula:

$$\begin{aligned} & \Sigma \frac{\Sigma X_1}{N_1} \\ &= \frac{2125,6}{31} \\ &= 68,56 \end{aligned}$$

Where :

X_1 : Mean score of control class

ΣX_1 : Sum score of control class

n_1 : Number of students of control class

Based on calculation above the results indicate that the mean score of post – test in control class was 68,56. It showed that the mean score of post – test in control class had effectiveness progress from 56,47 (Pre – test) to 68,56 (Post – test).

The mean score of the control class had been found, then continued to calculate the standard deviation of pre – test and post – test for two classes which presented in the following:

Table 4. 6 Deviation and Square Deviation for Control Class

No	Initial	Test Score		X	X2
		Pre – Test	Post - Test		
1	MRJ	68,8	68,8	0	0
2	AS	50	93,8	43,8	1.918
3	QRI	56,3	62,5	6,2	38,3
4	PAA	56,3	75	18,7	349
5	AZ	68,8	87,5	18,7	349
6	MH	62,5	75	12,5	156
7	DFW	62,5	68,8	6,3	39,7
8	ZZ	37,5	62,5	25	625
9	Z	43,8	43,8	0	0
10	MTQ	68,8	75	6,2	38,3
11	AR	43,8	43,8	0	0
12	ZAN	56,3	62,5	6,2	38,3
13	RZ	56,3	81,3	24,7	610
14	WF	62,5	62,5	0	0
15	NAF	62,5	62,5	0	0
16	AF	62,5	56,3	6,2	39,7
17	MAB	37,5	56,3	18,8	353
18	MAG	43,8	43,8	0	0
19	MT	43,8	62,5	18,7	349
20	AA	62,5	68,8	6,3	39,7
21	M	68,8	87,5	18,7	349
22	MFR	68,8	81,3	12,5	156
23	AM	43,8	87,5	43,7	1.909
24	RP	37,5	62,5	25	625
25	FFH	37,5	62,5	25	625
26	F	43,8	50	6,2	39,7
27	R	62,5	62,5	0	0
28	R	68,8	87,5	18,7	349
29	MR	56,3	100	43,7	1.909
30	MSH	56,3	68,8	12,5	156
31	ID	37,5	62,5	25	625
Total		1750,9	2125,6	449,3	11.685

The number of deviation was 449,3 and the number of square deviation was 11,685. The mean score deviation of control class was calculated by the following formula:

$$\Sigma \frac{\Sigma X1}{N1}$$

$$= \frac{449,3}{31}$$

$$= 14,49$$

The mean deviation of control class was 14,49 it is on the basis of the mean score deviation. The sum square deviation of experimental class was calculated by the following formula:

$$SS_1 = \sum x^2_1 - \frac{(\sum x_1)^2}{n_1}$$

$$= 11.685 - \frac{(449,3)^2}{31}$$

$$= 11.685 - \frac{201.870,49}{31}$$

$$= 11.685 - 6.511,95$$

$$= 5.174$$

Where:

S_1 : Sum squares in control class

$\sum x^2_1$: Sum squared scores in control class

n^1 : Number of students in control class

Based on the calculation above the sum squared of deviation in control class was 5.174.

Table 4. 7 The Mean Score and Deviation of Experimental Class

The Test of Experimental Class	Mean Score	Mean Deviation	Sum Squared Deviation
Pre – Test	61,57	21,69	3.398
Post – Test	83,17		

This table shows that the students' writing skill in which the mean score in pre – test was 61,57 (low). In the post – test, the mean score of the students improved up to 83,17 (increase) and the mean deviation was 21,6, which the sum squared deviation was 3.398.

Table 4. 8 The Mean Score and Deviation of Control Class

The Test of Control Class	Mean Score	Mean Deviation	Sum Squared Deviation
Pre – Test	54,46	14,49	5.174
Post – Test	68,56		

This table shows that the students' writing skill improved in which the mean score in pre-test was 54,46 (low). In the posttest, the mean score of the students not really improved 68,56 (low) and the mean deviation was 14,49 which the sum squared deviation was 5.176.

After calculating the mean score and deviation score of experimental class and control class, the researcher calculated the t-test value to see if there was a comparison between the experimental class and the control class of using mind mapping is effectiveness.

To calculate the score for experimental and control class, t-test was find out t-table informed whether the alternative hypothesis accepted or rejected. The equation was presented as follows:

$$t = \frac{\bar{X}_1 - \bar{X}_2}{\sqrt{\left(\frac{S_1 + S_2}{n_1 + n_2 - 2}\right)\left(\frac{1}{n_1} + \frac{1}{n_2}\right)}}$$

$$t = \frac{21,69 - 14,49}{\sqrt{\left(\frac{3.398 + 5.174}{33 + 31 - 2}\right)\left(\frac{1}{33} + \frac{1}{31}\right)}}$$

$$t = \frac{7,2}{\sqrt{\left(\frac{8.572}{62}\right)(0,0625)}}$$

$$t = \frac{7,2}{\sqrt{(138,258)(0,0625)}}$$

$$t = \frac{7,2}{\sqrt{8.641}}$$

$$t = \frac{7,2}{2.939}$$

$$t = 2.449$$

Where :

t = Test of Significance

x_1 = Mean score of the experimental class

x_2 = Mean score of the control class

SS_1 = The sum square of the experimental class

SS_2 = The sum of control class

N_1 = The total number of the experimental class

N_2 = The total number of control class

The calculation above showed that the score of experimental class and control class by using t-test was (2.449). Then based on significant difference between the experimental and control class above, the writer used the level of significant 0.05 of (2 –tailed) test.

The t-table obtained in the following:

Experimental class n_1 : 33

Control class n_2 p : 31

Degree of freedom (df) : $n_1 + n_2 - 2$

: $33 + 31 - 2$

: 62

Level of significant : 0.05

62 : 1.999

The degree of freedom (62) can be seen in the following list on t-table value with the level significant 0.05 or 5% 2.449. The results indicated that t-test

value (2.449) is higher than t-table value (1.999). It means that the alternative hypothesis (H_a) was accepted, in a sense that using mind mapping in improving students' writing skill.

B. Discussion of the Research

The teaching and learning process is an interaction between teachers with learners in a teaching to realize a predetermined goal. A teacher must be good at choosing the method to be used according to the designated goals of learning. So there will be the optimal teaching process.

The support of learning media expected learners can be motivated in learning, learners more enthusiastic to perform activities in learning so as to improve the learning outcomes. In this research the researcher used quasi – experimental design. The population in this research, was the seventh grade of MTs Alkhairaat Pusat Palu in academic years 2024/2025. Then the researcher took two classes as a sample, one as experimental class and the other was control class. The totaling numbers of students from two classes were 64 students. The experimental class consisted of 33 students and the control class consisted of 31 students.

CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter consists of conclusion and suggestion of the research

A. *Conclusion*

Based on the results of data analysis and hypothesis testing conducted in Chapter IV, it can be concluded that the application of mind mapping technique has a significant effect on improving the writing skill of seventh-grade students at MTs Alkhairaat Pusat Palu. This is evidenced by a comparison of pre-test and post-test results between the experimental class, which was given treatment using mind mapping technique, and the control class, which was not given treatment. The average post-test scores of the experimental class showed a higher increase compared to the control class. Additionally, the statistical test results show that the t-test value of 2.449 is higher than the t-table value of 1.999 at a significance level of 0.05 with a degree of freedom (df) of 62. Therefore, the alternative hypothesis (H_a) is accepted, and the null hypothesis (H_o) is rejected. This means that the answer to the research question in this research is that mind mapping technique can significantly improve students' writing skill. This technique has a positive impact on the writing learning process because it helps students organize their ideas and express them in a more structured and easily understandable written form

Therefore, looking at the research results and the evidence connected with the field situation and theory, the researcher concluded that online accent reduction software not effectively improve the students' writing at the seventh grade of MTs Alkhairaat Pusat Palu. The writer hopes that students more improve their writing a the success of the process of developing students' writing skill.

B. Suggestion

Based on the conclusion above, the researcher proposes some suggestion such as:

1. For teachers

The mind mapping could significantly to improve students' writing at the seventh grade of MTs Alkhairaat Pusat Palu. So it is strongly suggested for English teacher to be applied in teaching writing in the classroom.

2. For the students

The students should take part actively in learning process, do not be shy and afraid to learn English especially in writing. The students should learn more every time and also students suggested to pay attention of their learning English, especially in writing.

3. For the next researcher

The writer hopes that the research will be useful as a reference to other who conducted and develop a similar research.

Appendix 3 Lesson Plan

RENCANA PELAKSANAAN PEMBELAJARAN

Sekolah : MTs Al – Khairaat Pusat Palu
Mata Pelajaran : Bahasa Inggris
Kelas/Semester : VII/Ganjil
Materi : Teks Deskriptif
Tema : People (Orang)
Alokasi Waktu : 2 x 40 Menit
Pertemuan : 1 & 2 (Pertama dan Kedua)

A. KOMPETENSI DASAR

Kompetensi Dasar	Indikator Pencapaian
3.4 Membandingkan fungsi sosial, struktur teks, dan unsur kebahasaan beberapa teks deskriptif lisan dan tulisan dengan memberi dan meminta informasi terkait dengan teks deskriptif baik itu berupa orang, hewan dan benda, sangat pendek dan sederhana sesuai dengan konteks penggunaanya	4.4 Teks Deskriptif
	4.4.1 Menangkap makna secara kontekstual terkait fungsi sosial, struktur teks, dan unsur kebahasaan beberapa teks deskriptif lisan dan tulisan dengan memberi dan meminta informasi terkait dengan teks deskriptif baik itu berupa orang, hewan dan benda
	4.4.2 Menyusun teks deskriptif lisan dan tulis, sangat pendek dan sederhana, terkait berupa orang, hewan dan benda, memperhatikan fungsi sosial, struktur teks, dan kebahasaan secara benar dan sesuai konteks.

B. Tujuan Pembelajaran

Peserta didik diharapkan dapat:

1. Mengidentifikasi kata sifat seseorang, dengan benar
2. Menggunakan kalimat simple present tense dengan benar
3. Mengidenifikasi seseorang berdasarkan ciri fisiknya dengan benar

C. Metode, Media dan Sumber Belajar

1. Pendekatan/Model/Metode : Cooperative Learning/Mind Mapping
2. Alat/ Media : Papan Tulis, Handphone, Video
Pembelajaran, Gambar/foto
3. Sumber Belajar : Buku Pembelajaran Bahasa Inggris .

D. Langkah – Langkah Pembelajaran

Kegiatan	Deskripsi Kegiatan	Alokasi Waktu
Penduluan	 Guru memberikan salam.  Guru mengecek kehadiran.  Guru menyampaikan materi yang akan dipelajari.	10 Menit
	 Siswa mengamati dan menyimak penjelasan dari guru terkait dengan materi teks deskriptif tentang seseorang, serta ungkapan meminta informasi tentang teks deskriptif mengenai seseorang  Guru menggunakan mind mapping sebagai metode dalam menjelaskan materi teks deskriptif kepada siswa  Siswa menentukan kata sifat	

Inti	<p>berdasarkan apa yang digambar/ditulis guru dipapan tulis mengenai teks deksriptif</p> <ul style="list-style-type: none"> ✚ Guru memberikan penguatan terkait kata sifat dan ungkapan meminta dan memberi informasi terkait teks deksriptif mengenai seseorang ✚ Guru memberi kesempatan kepada siswa untuk bertanya tentang informasi apa yang ingin mereka ketahui terkait dengan teks deskriptif ✚ Guru memberikan LKPD dengan beberapa gambar.foto mengenai orang tersebut, kemudian memilih salah satu untuk dibuatkan mind mapnya untuk dikerjakan dalam kelompok sesuai minatnya. Kelompok terdiri dari 5 orang siswa ✚ Siswa mengumpulkan informasi tentang gambar/foro yang mereka pilih ✚ Siswa mempresentasikan hasil diskusi kelompok mereka ✚ Guru dan siswa menyimpulkan pelajaran terkait dengan teks deskriptif mengenai orang tersebut. 	60 Menit

Appendix 4 Improvement Before and After Treatment

Pre test

Amisha Bhatnagar
Vite / 9c

APPENDIX 1: PRE-TEST

1. Complete the blanks like the example below!

mind map for HOBBY

- dance
- enjoy
- happy
- singing

mind map for PET

- Cat
- happy
- play
- happy

2. Write your sentences in the below!

I have a cat. His name is "Miki". His color is "grey". My cat is very cute and beautiful.

Post test

Amisha Bhatnagar
Class: 9c

APPENDIX 2: POST-TEST

1. Complete the blanks like the example below!

mind map for CAT

- cute
- white
- fat
- smart

mind map for MYSELF

- happy
- interesting
- study
- you know

2. Write your sentences in the below!

My name is "Amisha Bhatnagar". You can call me "Amisha". I have four friends, and "interesting" personality. I like watching TV, and my teacher is watching TV.

The research revealed a significant improvement in students writing skills after the application of the mind mapping technique. Prior to the treatment, students in the experimental group showed low writing performance, with an

average pre-test score of 61.57. This indicated limited vocabulary use, poor grammar accuracy, and challenges in organizing ideas in written form.

After receiving the treatment using the mind mapping technique over six meetings, students demonstrated clear progress. The average post-test score increased to 83.17, showing that students were better able to generate ideas, organize content, and write with improved vocabulary and grammar.

The difference between the pre-test and post-test mean scores (an increase of 21,60 points) proves the effectiveness of mind mapping in supporting the writing process. In contrast, the control group, which did not receive the treatment, showed only a slight increase from 54.47 to 68.56, indicating that traditional methods were less effective.

Furthermore, the t-test value (2.449) being greater than the t-table value (1.999) at a 0.05 significance level confirms that the improvement in the experimental group was statistically significant
